FACTORIES AND OE PARTNERS

Summary of up-to-date key resources and product use instructions.

HANDLING THE BELT

Before handling any belt, review the belt handling instructions in the Gates Carbon Drive Owner's Manual. www.GatesCarbonDrive.com/OwnersManual

Do not crimp, twist, backbend, invert, bundle or zip tie the belt. Do not use the belt as a sprocket wrench or chainwhip. Do not roll on or pry on the belt.

Printed copies of our Owner's Manuals are provided with every belt shipped. Additional copies are available upon request. Contact the location nearest you or request via email to CarbonDrive@Gates.com. Gates recommends the handling text and images be included in the bike owner's manual.

SHIPPING THE BELT

One copy of the Gates Carbon Drive Owner's Manual must be shipped with each belt or Carbon Drive equipped bicycle that leaves your location.

To prevent damage and mishandling during shipping, belts should be provided pre-assembled to the bicycle frame or shipped in Gates approved packaging.

STORING THE BELT

Gates Carbon Drive™ belts are either shipped loose in bulk box packaging, or shipped in single-pack aftermarket packaging. It is important to keep belts in their original packaging to prevent handling damage.

Do not hang belts from pegs, do not zip-tie belts into a bundle. Review Belt Handling instructions above and in the Owner's Manual.

INSTALLING THE BELT

Before installing or performing any maintenance on any sprocket or belt, review all of the Carbon Drive University training videos found on the Tech/Resources page of our site: www.GatesCarbonDrive.com/tech/resources

Always install the belt over the sprockets without tension. Do not roll the belts onto the drive.

The Gates sprocket wrench is recommended for removing the rear sprocket.
