

Bosch GEN4 Spider Assembly Guard Change

Gates is making a running change to certain Bosch GEN4 4-bolt and 5-bolt spider assemblies where a guard with less offset can be used.

For specific assemblies, Gates will now utilize a guard with less offset, narrowing the overall package by 2.6mm, allowing more clearance for cosmetic and functional covers.

The guard shown in red will be replaced with a narrower guard, adding 2.6mm of outboard clearance.

Refer to the chart below for spider assemblies that will be affected. This running change will take effect in Q4 2021, and all product numbers will remain unchanged. Please contact Gates with any questions or assistance with spider or crankset assemblies.
